

Abstract

A filter (8) for use with a fuel pump (1) has a filter body (9) and a filter element (10) coupled to the filter body. The filter body is adapted to be attached to the fuel pump and has an opening (9a) for communicating with an inlet channel (3b, 4b) of the fuel pump that opens in an outer surface of the fuel pump in a direction substantially perpendicular to a longitudinal axis (L) of the fuel pump. The filter element defines a filter chamber (10c) that communicates with the opening of the filter body. The filter element extends along at least a part of the outer surface of the fuel pump.
